WEEK-3 TASK

Task Name

Seller and Inventory Management System

Abstract

The Seller and Inventory Management System is a database system used to manage sellers, products, stock, and sales details. It helps track available inventory, seller information, product prices, and stock quantities efficiently.

Introduction

This system provides an organized way to manage inventory and seller information using a relational database. It reduces manual work and makes it easy to add, update, delete, and retrieve product and seller records.

Objectives

- To manage seller information efficiently.
- To maintain product and inventory details.
- To track available stock quantities.
- To store product prices accurately.
- To identify products with their respective sellers.
- To reduce errors in inventory management.

Software Requirements

- Database: MySQL
- Language: SQL
- Tool: MySQL Workbench

SQL Code

1.Create Database

```
CREATE DATABASE SellerInventoryDB;
```

```
USE SellerInventoryDB;
```

2.Create Seller Table

```
CREATE TABLE Seller (  
    seller_id INT PRIMARY KEY,  
    seller_name VARCHAR(50)  
);
```

3.Create Inventory Table

```
CREATE TABLE Inventory (  
    product_id INT PRIMARY KEY,  
    product_name VARCHAR(50),  
    quantity INT,  
    price DECIMAL(10,2),  
    seller_id INT,  
    FOREIGN KEY (seller_id) REFERENCES Seller(seller_id)  
);
```

4.Insert Seller Data

```
INSERT INTO Seller VALUES
```

(1, 'Arun Stores'),

(2, 'Kumar Traders');

5.Insert Inventory Data

INSERT INTO Inventory VALUES

(101, 'Laptop', 20, 55000, 1),

(102, 'Keyboard', 50, 1200, 2),

(103, 'Mouse', 40, 700, 1);

6.Display All Inventory

SELECT * FROM Inventory;

Sample Output

Product ID	Product Name	Quantity	Price	Seller ID
101	Laptop	20	55000.00	1
102	Keyboard	50	1200.00	2
103	Mouse	40	700.00	1

Result

The database successfully stores seller, inventory, and sales information. Products can be linked with their sellers, and sales records can be maintained for inventory tracking.

Conclusion

The Seller and Inventory Management System provides a simple and efficient way to manage sellers, products, stock, and sales using SQL. It improves data organization and makes inventory management easier.
